

Sparking Change

SC

Your Sparking Change project, (SC) limited to 1 page, will include a brief structured overview of your project idea.

How does your project align with your experience and how will it enhance your leadership and expertise? How did you identify your project? Have your dept chair/senior faculty reviewed the fellowship project?

Project: ODMAC

Project Objective(s)	What are you seeking to accomplish? Project objectives include the measurable success criteria of the project. Describe the result(s) that the project seeks to create. The description may have less detail in early phases and more detail in later phases. Nonetheless, the scope description should always provide sufficient detail to provide later project scope planning, if necessary.
Project Deliverables	Deliverables should include the results from scope of above objectives. Each Project Objective outlined above should include one or more deliverable(s).
Project Milestones	Organize your project into 10-month timeline and identify key milestones to measure progress. Project should begin in July timeframe. If possible, impose dates on those scheduled milestones. You can re-set dates as project evolves to complete the project within timeline.
Project Assumptions	What outcome do you anticipate as a result of pursuing these objectives?
Project Constraints	Stay on track by identifying the boundaries to your project, if any. Constraints may include time, budget, access to resources, etc.
Project Mentor	Do you have a project mentor or would like us to connect you to someone?

Example projects:

How to improve patient's waiting room experience?

To consolidate sharable resources for clinical/educational/research activity?

How to enhance communication or access between people/teams? How to improve research team communication?

How to lead a small/synergistic/collaborative (research) group?

How to improve grant submissions/create a mentoring platform?

How to build inclusivity in the culture of a clinic/lab/department?

How to organize a colloquium to develop collaborations?

How to build a study cohort?
